

Mercury Rising –

How you and your children are unknowingly poisoned by mercury and receiving its' debilitating effects.

This article shares my personal enlightenment regarding mercury toxicity and the lives that it's shackling, including my own. Over the past two years I have experienced mysterious symptoms (debilitating burning sensations, muscle pain, and anxiety) that have left me frustrated and hopeless. Like most, as I searched for an answer I found myself stuck on the medical treadmill, treating the symptoms with medications only to treat side effects with more drugs. Realizing that I was going nowhere I explored other options. This is when I contacted **Dr. Daniel Pompa** and shared with him my struggles. He instantly recognized my symptoms as mercury induced and recommended that I read a chapter from His future book. As I read, I received hope and validation for what I was feeling that I previously did not understand, but of anyone I should have.

With a M.S. in Environmental Geology and profession "safely" cleaning up hazardous waste I understood mercury's toxic effects on human health and the environment. I did not understand that my mercury exposure is more likely the result of allergy shots, dental fillings, and vaccinations rather than from my working environment.

Dr. Pompa's book cites that silver amalgam fillings and vaccinations create the highest risk to our bodies and minds. According to the FDA, a child who is vaccinated will receive mercury exposures that exceed the Environmental Protection Agency's own guidelines by up to 129 times. With this knowledge the FDA has only recently started removing mercury from vaccinations. When amalgam fillings are removed they are considered hazardous waste. They can only be disposed of at a special hazardous waste repository designed to contain the mercury released from the fillings – this protects our groundwater and environment from its toxic effects.

Our bodies are not designed to store hazardous waste, but like waste repositories, mercury, the second most toxic substance on earth, becomes trapped in our bodies. According to **Dr. Pompa** and many other researchers this is why this vaccinated generation is being diagnosed with so many strange "incurable" new millennial diseases.

Diseases such as chronic fatigue, fibromyalgia, alzheimer's, asthma, allergies, ADD, ADHD, adrenal disorders, thyroid disorders, autoimmune diseases, candida, leaky gut syn-

drome, depression, dementia, schizophrenia, bipolar dysfunctions, infertility, insomnia, irritable bowel syndrome (IBS), lupus, muscular dystrophy (MS), Parkinson's, chronic anxiety, rheumatoid arthritis and even cancer are only a short list what mercury can induce.

So how can mercury cause so many illnesses and more? Mercury is a neurotoxin that directly attacks the brain. It makes its way into every cell in the body affecting cellular metabolism and DNA replication; and if mercury affects every cell then it also affects every organ. Mercury's toxic effects are clearly documented in volumes of professional publications. Yet despite mounds of research, it is still ignored by most health professionals. We are medicated but never cured. It is like pulling a weed and never removing the roots. This is why I finally changed my approach and found myself at **Dr. Pompa's** office. He removes the interferences so the body can do the healing. I know that I, like many patients before me, will become another walking miracle - cured from an incurable disease.

Do not wait like I did to start your journey toward being alive again. Mercury poisoning is accurately tested through an analytical laboratory. Find out today if this is the reason your life is falling apart. **Dr. Pompa's** protocols to remove toxins are not only a guide to health and healing but are the fruit of his personal victory over mercury poisoning.
